

### Sanitizing and Disinfecting – Required but is it Enough?

Surfaces treated with sanitizers and disinfectants are free of microorganisms for only the brief period of time from when your sanitizer/disinfectant is applied to when it dries.

**Your surface is NOT protected between Sanitizing and Disinfecting cleaning events!**

Surface cross-contamination occurs throughout the day and night everywhere through droplets, direct surface contact and airborne transmission.

#### Limited Surface Protection when you sanitize/disinfect 4 times daily

- Up to 40 minutes of Surface Protection
- Surfaces are protected 2.8% of the time in a 24-hour period
- **ARE YOUR SURFACES REALLY PROTECTED?**

### Surface Protection using PreventX 24/7™ Antimicrobial

Microorganisms cannot exist on a **PreventX 24/7™** treated surface and cannot thrive in-between sanitizing and disinfecting events ensuring maximum surface protection.

Surface cross-contamination, regardless of type, is significantly reduced everywhere **PreventX 24/7™** is used.

#### Extended Surface Protection Using PreventX 24/7™

- Surface Protection 24 hours 7 days a week
- One application protects surface up to 90 days
- Implement one of the **NewEraSOS** antimicrobial programs, and **MAXIMIZE SURFACE PROTECTION**
