

## Why Choose PreventX 24/7™ vs Other Antimicrobials

Long-lasting surface protection antimicrobials are registered by the EPA as bacteriostatics. Per EPA registration guidelines, all antimicrobials will offer similar features and benefits with similar claims. Some companies will stretch these claims to the fullest extent that could potentially mislead customers, but, in the end, all bacteriostatics have a minimum registration guideline.

### What separates PreventX 24/7™ from all others?

- Dow synthesis is conducted in an end-user methanol carrier formulation that has a 30 plus year compliance rate with the US EPA regarding environmental, safety, and toxicity (DOW Corning AEM 5700 / 5772). Dow Corning's AEM 5700 was eventually brought to market, by agreement, in Midland, MI (Dow's home office location) under the name Aegis Microbe Shield.
- The manufacturer of PreventX 24/7™ was selected by Aegis over 20 years ago to blend and help formulate specific application processes for the DOW patented formulation. The necessary raw materials, specialized generation equipment, and proprietary blending processes utilized for millions of dollars of white paper testing by DOW are currently used for building PreventX 24/7™. No other antimicrobial can claim this and provide this technology at our price point.
- To avoid Dow awarded patents, competitor's synthesis formulations, including water-based products, appeared over the years that range in stability depending on the dilution process and/or the presence of stabilizers and additives. These are the other antimicrobials that you will find in the marketplace.
- NewEraSOS can produce more than one million gallons of PreventX 24/7™ monthly, access to rail, and six in house tanker trucks to service our client base.
- In almost all cases, the percentage of the active ingredient (0.84%) is higher than competitor products.
- PreventX 24/7™ is effective on both hard and soft surfaces.

NewEraSOS can deliver to our customers the most effective antimicrobial at the most competitive pricing. Water-based antimicrobials are inferior, and, in most cases, their price point will be a strong indicator.

The founders of NewEraSOS have more than 25 years of experience with the manufacturer and have partnered together to create and deliver the most effective antimicrobial to the marketplace.
