

### What is OdorCap?

**OdorCap** is a unique media blend that contains perlite and our **EnCap Technology** which accelerates organic gas remediation. Its primary use is to reduce organic odors were ever those odors are generated.

- Using our **Encap Technology**, the odors are absorbed by the perlite which then bio-remediates them.
  - **EnCap Technology** allows for the encapsulation of the organic gas with an all-natural plant extract.
  - **EnCap Technology** ensures that contaminants are broken up by means of micro-fractionalizing.
  - This unique encapsulation process disunites targeted **F.O.G.'s** (fats, oils, and greases) and provides a desirable food source for indigenous (existing) bacteria.
- **OdorCap** out-performs carbon filters by 8X to 10X. Ideal for odor remediation in collection systems (sanitary sewer lines), grease interceptors, oil/water separators, home heating oil storage and any place where organic gases are generated.
- Heavier than competing products by 40% ensures absorbent stays intact.
- Cost Effective - 40% less than traditional carbon systems.

**MH insert at install**

**Appearance after absorbing H<sub>2</sub>S odors (100ppm+) for 30 days**
