

Avoid Expensive Plumbing Calls

- Calcium (uric salt) build-up is the #1 culprit for expensive plumbing calls regarding slow running or plugged urinals.
- Over time, calcium build-up develops at the effluent drain opening and far down the pipeline. This accumulated hardened mineral also harbors odor causing bacteria that creates unpleasant facilities.
- *The use of enzymes, cleaners, and fragrances WILL NOT dissolve these calcium ROCKS!*
- *Cal-Solv* will dissolve these calcified rocks and eliminate the harborage of odor causing bacteria.

Cal-Solv Urinal Block and Screen

- Utilizing *safe acid technology*, Cal-Solv urinal block and screen will reduce calcium deposits and even rust stains at the drain. More importantly, calcium is also removed down line. Fragrance is added to our block along with detergents that break-up other contaminants (beyond calcium salts). In addition to the block it also has a screen trap to stop other debris from entering the drain.
- Each block lasts approximately 45 days depending on usage.
- Better than 60% of all urinal plumbing calls are a direct result of calcium (uric salt) build-up. Do the math (\$) and easily realize that the *Cal-Solv* Urinal Block and Screen will save money, time, anxiety, and protect your assets. In addition, facilities will project a clean and fresh environment to customers and employees.
- *Cal-Solv* is a “*new technology*” solution for lowering urinal maintenance cost. *Cal-Solv* is simple, easy to use, time driven and works beyond masking facilities with fragrance.
- Cal-Solv Urinal Block comes packaged 12 per case
