

What is OdorCap?

OdorCap is a unique media blend that contains perlite and our **EnCap technology** which accelerates organic gas remediation. Its primary use is to reduce organic odors were ever those odors are generated.

- Our **Encap Technology** is absorbed by the perlite which then bio-remediates the odors.
 - **EnCap Technology** allows for the encapsulation of the organic gas with an all-natural plant extract.
 - **EnCap Technology** ensures that contaminants are broken up by means of micro-fractionalizing.
 - This unique encapsulation process disunites targeted **FOG's** (fats, oils, and greases) and provides a desirable food source for indigenous (existing) bacteria.
- **OdorCap** out-performs carbon filters by 8X to 10X. Ideal for odor remediation in collection systems (sanitary sewer lines), grease interceptors, oil/water separators, home heating oil storage and any place where organic gases are generated.
- Heavier product than competing products by 40% ensuring absorbent remains intact.
- Cost Effective - 40% less than traditional carbon systems.
