

What exactly is Surface Medic with PreventX 24/7?

Surface Medic is a highly concentrated *cleaner and surface protector*. **Surface Medic** was designed to meet the needs of industries to *clean and protect* surfaces (in one process) from contaminants and deterioration caused by microbial development, odor producing bacteria, mold, and mildew. The cleaning agents in **Surface Medic** are near pH neutral yet aggressive enough to handle the toughest industrial jobs (i.e. showers & floors).

The technology built into **PreventX 24/7** includes an EPA registered antimicrobial that imparts a durable, *microscopic shield*. This *non-toxic microscopic shield* is resistant to germs, odor producing mold, and mildew. The power of **PreventX 24/7** reduces valuable time and labor for frequent cleaning tasks and can extend the useful life of treated articles (i.e. grout).

What are the applications for Surface Medic with PreventX 24/7 Antimicrobial Finish?

Surface Medic goes far beyond the uses of ordinary cleaners and can be used on *any surface unaffected by water*. **Surface Medic** is *part of a system* providing a healthy surface environment and extensively used in programs across the USA. Virtually any “touch point” or areas affected by germs, odor producing bacteria, mold or mildew should be cleaned with **Surface Medic**. It is important to note that since **Surface Medic** will meet so many challenges (Floors, walls, laundry); multiple SKU’s may be reduced by implementing **Surface Medic**.

How does Surface Medic work?

Most cleaners that work well usually have a high or low pH. **Surface Medic** utilizes new technology that cleans as well or better as these potentially hazardous cleaners but utilizes a green and neutral delivery.

The *non-toxic shield* is created with a safe and proven EPA registered antimicrobial that dates back nearly 30 years with no reported incidences. Every time surfaces are cleaned with **Surface Medic** a small amount of **PreventX 24/7** is left behind. When this dries thousands of electrically charged microscopic spikes are implanted on the surface. When germs, odor producing bacteria, mold, or mildew approaches the *microscopic shield*; the intruders are physically punctured (as opposed to being poisoned). Therefore, we can say that our cured *microscopic shield* is non-toxic.

Furthermore, **Surface Medic’s** *microscopic shield* will make previously cleaned surfaces resistant to rapid build-up of soap scum and grime for future easier cleanings. Odors, mold, and mildew are significantly reduced, allowing your surfaces to remain protected.
