

NewEraAgri™ FreshBarn Pro

Dry Bedding - Healthy Barns - Happy Animals

Product Information

NewEraAgri™ FreshBarn Pro is a multifunctional litter and bedding treatment additive specifically designed for use in poultry barns, livestock facilities, and any animal bedding areas where animals urinate and defecate. It effectively controls and reduces moisture, humidity, ammonia, and strong odors caused by organic matter. By managing humidity and moisture levels in barn litter and bedding, it helps reduce ammonia and other harmful odors that pose significant health risks to animals.

Quality Assurance: NewEraAgri™ FreshBarn Pro is independently lab-tested and contains no pesticides or insecticides.

Where to Use

- Poultry barns (broilers, layers, turkeys)
- Livestock facilities (cattle, swine, sheep, goats)
- Horse stables and stalls
- Small animal housing (rabbits, etc.)
- Any barn or bedding area where animals urinate and defecate

Benefits

- Improves animal health and decreases mortality rates
- Increases stocking density capacity
- Reduces respiratory stress through ammonia odor absorption

- Creates a healthier, low-ammonia environment with improved air quality
- Improves and maintains bedding quality for extended reuse
- Keeps bedding dry by reducing moisture and humidity
- Will not acidify bedding pH
- Reduces fly populations by controlling moisture and humidity that attract and support fly breeding
- Reduces heating and ventilation costs
- Improves animal performance metrics
- Maintains higher bedding quality, creating more valuable fertilizer for farm fields
- Extends bedding life, reducing replacement frequency

Composition

1. Bio-Active Enzymes: Targeted enzyme groups that help reduce ammonia and other foul odors caused by urine, feces, and organic residue.
2. Micronized Natural-Earth Minerals
 - Naturally reduce airborne ammonia levels and odor
 - Absorb excess humidity and moisture from the air
 - Address high ammonia levels

3. Neutral Clays
 - Absorb excess moisture from urine and feces
 - Promote drying by increasing floor surface area
 - Reduce contact between animals and waste
 - Insulate animals from ground cooling effects
 - Provide protective cushioning between animals and floor

Use Instructions

See label for complete instructions for dry and wet applications.

Standard Dry Application

- Recommended Rate: 35–50 pounds per 1,000 square feet of floor space
- Typical Application for Poultry Houses: 800–1,000 pounds per house per grow-out cycle

Wet Application Method

- Mix 200 grams of **NewEraAgri™ FreshBarn Pro** with 4 liters of warm or hot water
- Allow mixture to cool completely before application
- Important: Mix in plastic containers only—do not use metal containers

Maintenance: Repeat application every four weeks as needed

Quick Specs

Sizes: 50lb bags, 50lb pails, 2000lb sacks

Appearance: Granular Powder

Color: Tan-Brown-White

Storage: 40°F to 120°F
